

FOOTWEAR

VICTOR 3 TYPES OF FOOTWEAR

It is extremely important to choose a suitable pair of badminton shoes when you play. As well as avoiding sports injury, the right shoes can help you perform better. VICTOR's R&D team has divided badminton shoes into three types according to different functions, each type unique in its own way. The three types of badminton shoes are explained below:

FIT AND COMFORT

ANTI-TORSION AND SHOCK RESISTANCE

LIGHT WEIGHT AND MOTION

Badminton footwork can be characterized as "forward, back, sudden turn, sudden halt." The ALL-AROUND type of badminton footwear includes the characteristics: CUSHION, STABLE, NATURAL MOTION and LIGHT WEIGHT.

The footwork in badminton, is inspired by the Chinese character "米". The SUPPORT type of badminton footwear includes two characteristics: CUSHION and STABLE.

Badminton is a sport that requires speed and agility. The SPEED type of badminton footwear includes two characteristics: LIGHT WEIGHT and MOTION.

NEO DUPLEX

The newly invented double-wedge structure midsole takes the ENERGymax3.0 cushioning and lays Light Resilient EVA beneath sloping at an biomechanically computed angle of 7° to complement the foot's dynamic motion, providing exceptional support and the plush, bouncy cushioning the shuttlers need to perform quick movements.

ENERGYMAX3.0

The new generation of highly elasticity material, with a 22% increase in rebound ability. The shock absorbcency increase by 6%, which can dramatically enhance the instant resilience, shock absorption and cushioning effect to shocks.

ENERGYMAX

The high elasticity shock absorbing material of ENERGYMAX has excellent durability, strength, and is retains it's shape well. It is used in footwear-related products to increase the overall support of the shoes. It reduces momentum loss and redirects the momentum towards the next direction.

FOOTWEAR TECHNOLOGIES

Shock Absorption and Bound

Light Resilient EVA

Lightweight, highly resilient, and durable midsole, increased 16% in durability and 5% in resilent performance compared to the original high resilent EVA, reduced 19% of weight, improves the life-span of shoes, and lower the muscle burden for users in intensive exercises, allows taking agile paces quickly.

LM LIGHTWEIGHT MIDSOLE

The ultralight material used for mid-sole is much lighter than ordinary EVA. Lightweight, strong and resistant to deformation, this material is capable of absorbing part of external impacts and providing excellent cushion.

Resilient EVA

Highly resilent midsole material is more durable and retains its shape better. It not only provides the basic stability and shock absorption but also increases flexibility and the reaction time while changing directions.

Stable

LS-S

The outside of forefoot is designed using high-strength TPU. This significantly enhances the lateral stability during intense and rapid transfer of direction when playing badminton.

CARBON POWER

The three-dimensional carbon fiber sheet provides mid-sole stability and decreases the torsional strain on the foot's arch.

TalonGuard

TalonGuard is a lateral stability technology which combines two levels of TPU. Like an eagle's claw, it is placed at the lateral forefoot to provide stability and also prevents pronation during lateral movement.

Durability

D-MAX

This is a special ultra-abrasion resistance soft rubber that provide excellent grip, slip resistance and wear resistance.

V-Durable

The inner toe uses the special technics to provide better strength and durability.

Embrace

Auto fit

Through the layered design of laces and a high strength wedge shaped belt the elastic strap and laces can be adjusted simultaneously. This provides a more comprehensive fit as well and allows the shoe to more effectively protect your feet.

BRACE TEK

BRACE TEK technology provides more comfort and safety feeling to the foot, which gives more stability throughout the entire shoe.

Outsole

VSR ANTI-SLIP

Upgraded outsole rubber, slip-resistant performance increases by 21% on dry PU floor.

V-BRAKE

The V-shaped square design allows a light-weight and minimized landing area, while providing the anti-slip for vertical and lateral movement. This gives you more responsive and agile footwork while providing additional durability.

RADIATION

Coping with the asterisk steps, the center is the rounded-shape design surrounded by triangular shapes. The radiation pattern provides more grip on the court during lateral and vertical movements. The small lump pattern distribution adds additional grip as the sensor and increases the grip.

Mesh

Breathing

A unique breathing mesh layer is used to increase ventilation. It facilitates the heat dissipation. This creates a more comfortable environment for the feet.

SH-P9200

Midsole Structure

NEO DUPLEX, the concept is inputted the midsole structure. The new concept of midsole is a separated structure which strengthen the new function from front and back. It's the brand new design in the midsole.

Performance of Shock - Absorbing

A / B / C - Commercial Material.

FLAT ARCH

VT-XD8F
High Elasticity Flat Arch Sports Insole

► MATERIAL ENERGYMAX + SOLID EVA

1. Rippled Anti-Slip Structure

Forefoot position designed with rippled anti-slip structure based on the curvature of the foot with the proper spacing slip to make the best grip during extreme movements.

2. Moisture-Wicking Air Holes

Discharge moisture rapidly to keep feet dry and comfortable.

3. Fine Rhomboidal Anti-Slip Pattern

Improve friction, enhancing the ability to engage insoles and socks.

4. Ergonomic Design

Scientific computing and ergonomic design allows foot arch and heel fits the insole much better. Strengthening protection and support for intense movements.

5. ENERGYMAX3.0

Full length design with latest ENERGYMAX3.0 high elastic materials, reflect high comfort foot feeling.

6. Anti-Slip Arcs

Curved thin wavy stripe design anti-slip arcs on insole back, enhances both its flexibility and the anti-slip effect, make forefoot to bend easily and enhance instant start-up performance.

7. Highly Intensified EVA & High Elastic Cushion

Combined Highly Intensified EVA and High Elastic Cushion material for normal arch, highly intensified EVA provides well support for arch, enhancing stability during movement, reducing pressure and fatigue for arch; high elastic cushion with PORON material provides high durability and performance of cushion.

8. High Elastic Cushion

Forefoot and heel position insert with high elastic cushion material- PORON, which has high buffer, high elastic, durable and not easily deformed features, to reduce the plantar pressure during exercise.

9. Highly Intensified EVA

Flat arch are likely to leading to the occurrence of valgus during exercise, the Highly Intensified EVA are utilized on the position of arch to heel, to support the medial foot and reduce foot injuries.
